Introduction.

This year marks the hundredth anniversary of the beginning of instrumental rainfall observations in Palestine and in the Orient as a whole.

Palestine

The first rainfall records in Palestine were kept by Dr. MacGowan at the Scottish Hospital in Jerusalem. It was no accident that MacGowan became interested in meteorological observations, because at that time the first steps were being taken in Europe to obtain accurate knowledge of climatic phenomena by instrumental readings.

MacGowan made his observations in David Street in the Old City of Jerusalem for fifteen years. The work was then continued and expanded by another physician, Dr. Chaplin, who was in communication with the English Palestine Exploration Fund (which was founded at that time) and with the Meteorological Society of England. The station was then provided with additional apparatus. Records of rainfall were kept at the station until 1892, when the hospital was moved to new premises in the Zichron Moshe Quarter of Jerusalem. These two meteorological stations were maintained until the outbreak of war in 1914. Observations were then discontinued in the Old City, but were resumed after the war in the new hospital, where they are carried on to this day. During the first fifty years additional observations were taken in different parts of Jerusalem by Germans, Frenchmen and Russians and, during the past twenty-five years, also by Jews.

Among the oldest stations in Palestine are those in Nazareth, which began to function in 1869, and in Gaza, though with long intermissions. In Haifa observations have been taken continuously since 1880. The American University in Beirut has kept continuous records ever since 1876. In Tiberias and Hebron, also, records have been kept since 1891 (with occasional intermissions) by the physicians of the local Scottish Hospitals. Many stations were also opened in Palestine by the Deutscher Palästina Verein at the suggestion of Professor Blanckenhorn, a German geologist. These stations functioned for 23 years until 1918, but only a few of them resumed their work at a later time.

The Mikveh Israel Agricultural School was the first Jewish settlement to keep meteorological records, having begun in 1897. The writer is informed by Mr. E. Krause, director of the School for the past thirty years, that records of rainfall were kept at the school, while he was still a student there, for many years prior to 1897. These early records have not, however, been found at yet. Among the Jewish localities which have kept rainfall records at various times since 1901 may be mentioned Menhamia, Rosh Pinah, Tel Aviv, Beer Tuvia, Hulda, Ben Shemen, Yavniel, Degania and Kinnereth.

Meteorological observations on a large scale were begun by Jews in 1919, and records are kept in practically all the Jewish agricultural settlements. In recent years a large and growing number of Arab villages have taken meteorological observations in general and rainfall measurements in particular.

While in 1918 there were only 20 stations in all Palestine, the number today runs into several hundreds.

Transjordan

Meteorological observations were begun in Transjordan at a very late date. Up to 1926 there were no stations at all there (except in 1901-1905, when rainfall measurements were taken at Ma'an in Edom and at Edrei on the River Yarmuk during the construction of the Hedjas railway). A station opened in 1926 near Amman by the Royal Air Force was the only one in all Transjordan until 1933. Since 1933/34 stations for measuring rainfall have been opened in various parts of the country, and there are now 50 between Aqaba and Jebel Druze, with the number growing from year to year. Now that the data accumulated by these stations are available, much more is known of climatic conditions in Transjordan than formerly.

Syria and Lebanon

Before 1929 very little meteorological information was extant concerning Syria. Material has, however, been available in Damascus since 1909/10 when observations were taken by the electric company. In the Lebanon, on the other hand, data are available on Beirut since 1876 and on various localities on the western slopes of Mt Lebanon for several years before 1914. Observations were initiated by the American University of Beirut and the Institut Central Meteorologique de France, which kept records in Kreya and Ksara in the Baka'a. The French Mandatory Government in Syria inaugurated a meteorological service in 1929 which at the last included 50 stations up to the Turkish and Iraqi frontiers, and also at the oil pumping stations of Iraq on the Kirkuk-Haifa and the Kirkuk-Tripoli lines. Since 1941 the Hydrological Department of the Lebanese Government has opened several stations on both sides of Mount Lebanon which have greatly increased our knowledge of precipitation conditions both liquid and solid, at different altitudes.

The Department of Agriculture of the Syrian Government has also opened stations in villages in the Hauran, Golan, Central and Northern Syria, the Syrian Desert, and Jezireh beyond the Euphrates. The writer is greatly indebted to the agricultural supervisor of the Syrian Government, the hydrological engineer of the Lebanese Government, and the director of the Observatory at Kairouan for their kindness in giving him access to their records.

Iraq

In Iraq rainfall measurements were begun at the end of the nineteenth century and early in the twentieth at Mosul, Bagdad, and Basra, but in a vast area of 453,000 square kilometers these three stations were only a drop in the bucket. In particular, data were lacking about precipitation in the mountains of Kurdistan and the Zagros mountains of Western Persia where the Tigris and its tributaries take their rise, and the mountains of Armenia and Eastern Turkey, where the Euphrates has its sources.

Since 1936 numerous stations have been opened in Iraq and the adjacent areas. There were 100 within the borders of Iraq in 1944.

- - - - -

- (1) The sources drawn upon by the author are indicated in a separate list.
- (2) Not all the data on which this book is based gave been published hitherto, and many of the figures (those relating to Syria in particular) are now being made public for the first time.
- (3) In Iraq, Syria and Transjordan there are far fewer stations than in Palestine, but it is very gratifying to note the striking change in the meteorological map of the Orient when comparing the state of our knowledge in this field at the beginning and the end of the first 100 years.

שבהה זו תפלאיינה מאה שנה להתחלת תצפיות הגשמיים בארץ-ישראל וゾחי גם התחילה בתצפיות במזרחה כלו. המתחיל היה סק גווון, רופא בית החולים הסקווי בירושלים. לא היה זה טקרה שהחלה אז להעתנין בתצפיות אקליפסיות, חרי באותו זמן כמה תנועה בארץות אירופה לרבייהן. ידיעות רצינודיליות וטמיינות על התבאים האקליפטיים באזורי תעשיית תצפיות.

תצפיות סק גווון נעשו ברחוב המלך דוד בירושלים העתיקה ותנה נמשכו 15 שנה. ואחריו המשיך בעבודה זו דיר. טפלין וגם הרחיבוה. הוא בא בדרכו גם עם החברה האנגליית לחקרת א"י שנודה אז עם החברה. תפיאורו-רולוגית האנגליית וחתמה צוידה במכשורם נוספים. המדידות בתחום זו, המשכו עד 1892 שנה בה עבר בית החולים למקומו החדש בזכרון-משה. מאז נמשכו המדידות אנגליות, עד פרוץ מלחמת העולם ב-1914. מאז נמשכו המדידות בירושלים (העיר העתיקה) ואילו אחד המלחמות שבו למדור בזכרון משה את הגשמיים עד היום. בירושלים נמשכו ב-50 השנה האחרובות כמה מדידות גשמיים חלקים שונים של העיר ע"י גרמנים, צרפתים, ורוסים וב-25 השנים לאחר מכן גם ע"י יהודים.

מחחדרות העתיקות ביוטר בארץ יש להזכיר את המדידות בנצרת מס' 869 ראיין, מעה א"כ מאותו הזמן בהפקת ארכות. מחייה ישנה שורת מדידות רצופות מאוקטובר 1880 עד היום. מהארוברים האmericains שנות ינוב מספירים מאז 1876 שלא נפסיקו עד היום זה 70 שנה. גם טבריה ומחברון ישנן מדידות מס' 1891 ואילך בהתקנות שוכן שוחצאו לפועל גם כאן ע"י רופא המופיע תקופה. שורת תצפיות נסודה בא"י ע"י החברה הגרמנית לחקרת א"י ביזמתו של הגאולוג מ. בלנקנברון, שהמשיכו בפועלן עד סוף המלחמה הקודמת מס' 23 שנה הפק מעתות מהן הושיבו בתצפיותיה אחריו כן.

מחשובים היהודים יש לציין את ביה"ס האקלאי מקוה-ישראל, שהיה הראשון שעדן תצפיות אקליפטיות. שורת התבוננים המצויים בידנו מוקדם מהסתחליה מס' 1897 אוlus מס' א. קדוזה, מנהל המוסד ב-30 השנים לאחר מכן במסר לח"ם שהוא זוכר כי בהיותו תלמיד מודע את הגשמיים במקומם הווה שנים דברות לפני. 1897 החומר ההוא לא נמצא עדין. ישובים יהודים שעטנו במדידות אשימים מס' 1900 ואילך ובתרבוכים שונים הם: מתחמיה, ראש-פינה, תל-אביב, באר-טובייה, חולדה, בן-שמן, יבנאל, דגניה וככראת.

תקופת התצפיות בקנה מידה גדול ע"י יהודים בארץ זו מתחליה מס' 919 ומטסף היישובים העזקים בזמן האחרון בתצפיות גשמי שורה כמעט למשך הישובים היהודיים בכלל. בשנים לאחר מכן נרבע גם מטרד יישובים ערביים בכרך הלוקחים חלק בתצפיות אקלימיות בכלל ותצפיות גשמיים בפרט. בעוד שבשנת 1918 לא היו אלא 20 תצפיות בלבד בכלל הארץ, מג'יע מטסף עתה למאה טראון.

בעבר היידן המזרחי החלו במדידות באחור ר.ב. עד 1926 לא היו כל תצפיות פרט ל-4 שנים מס' 1901-1905 שבחן מדרן את הגשמיים, בזאת בינון הדרכם החג'זית, בטעון שבאים ובأدער שעל היידן. ב-1926 החלו לפועל תצפיות חייל התעופה הבריטי ע"י רבת-עמון וחייא הייתה היתה היחידה עד 1933 בכל עבר היידן המזרחי. אוול מס' 1933/34 ואילך בוטן בין עקבות מדידה לגשמיים במקומות שונבים בעבר היידן ועתה מג'יע מטסף תחיה להר הדרוזים ל-50 ומעלה נדל מסנה לטבה. ברורו הרא כי בתבניות אלה בותחים לנו את האפשרות להכיר את תגאי עבר היידן בזורה שלא ידענו כלל לפניו כן.

טורייה מעתות היזירוגת מלפני 1929. רק מדם יש ידיעות החל מס' 1910 ואילך טזיריו ע"י חברת החשמל. ואילו מהלכדו ישבן ידיעות על הגשמיים טביזיות מאז 1876 ומכתה מקומות במעלה המערבי של הלבנון משך כמה שנים לטי. 1914, תצפיות אלו סודרו ביזמת האזני-ברדייטה האmericains ביצמת המכון הסדכי המזרחי-רומי. בפדיום שדר אוטן בקריה ובקסרו שבבבון מס' 1929 ואילך החל לפעול אסרויה המזרחי-רומי של השליטין המבולדורי האיטלקי בסוריה והוא כלל לאחרונה ב-50 מקומות עד גבול תורכיה ועיראק. גן

בתהננות שאייבת הנפש העיראקי בכו קרכוק-חיפה וקרקוק-טריפולי נסדו כפה תחנות מדידה שלמדו מהם תנאי מדבר סוריה. ס 1941 הקיטה המחלקה ההדרולוגית של ממשלת לבנון כמה תחנות נוספות בשני עברי הדר הלבנון שהויסטו הרבה לדיינטג על חלוקת המשקעים הנוזלים והמזקים במדרבי הלבנון.

גם מחלקת החקלאות של ממשלת סוריה סדרה נקודות מדידה נוספות בכרמי בחרון, בגולן, בתודתי נתוב להפקה החקלאי של ממשלת دمشق ולמהנדס מעבר לפרט. תודתי נתוב להפקה החקלאי של ממשלת دمشق ולמהנדס ההדרולוגי של משלחת הלבנון וכן למנהל המצפה בקורסה על האפשרות שבתנה לי לגשת אל החומר שברשותם.

בעיראק החלו במדידות גשמי מוסול, בגדי ובכרצה עוד בטוויה המאה הקדומה ובראשית המאה הנוכחית. אולם בשוח העצום של 453 אלף קמ"ר היו הידיונות שלוש נקודות אלו רק כטפה בהם. בքר היה מורגש מסרון. הידיונה על המשקעים בהרי כורדיםstan ובתاري זגרום שבפרט המערבית שלהם באים מי החדקל ובחרי ארמניה-תרכיה שמם באים ס"י הפרט.

ס 1936 ואילך הולך ורב מסגר התהננות בעיראק וסביבותיה והוא הגיע בಗבולות עיראק בלבד ל 100 ב 1944.

מטפר שננות המדידה בעיראק, סוריה, ועבר הירדן, קטן הרבה מאשר בארץ ישראל אבל יש לציין בסוף וכשמחה את ההבדל במצב חקר האקלים במצרים כלו עם כלות מה שנה בראשית החקירה שבעתה באפן צבוע.

החותמר שעליו הסמכנו בספר זה לא כלו פורסם עד הנה ויתר הדביה כתובים, בעיקר מסוריה, הרואים אור בפעם הראשונה. המקורות מהם שאבנום בתבניות בראשימה טיווחת.

Bratislava

מאה שנה של תצלפיות גשמיים

(תר"ה-תש"ה)

הוצאת ע"י

ד"ר ד. אשבל
